## Section 1 - Program Mission

The mission of the Applied Mathematics degree program is to prepare students for immediate participation in the workforce, or for graduate study. Employment opportunities include pharmaceutical companies, government agencies (like the National Security Agency), insurance companies (as actuaries), publishing companies (as editors of technical publications) and public K-12 and higher education.

Graduates will have knowledge and appreciation of the breadth and depth of mathematics, including the connections between different areas of mathematics, and between mathematics and other disciplines.
(The mission, objectives, and student learning outcomes for the Applied Mathematics program are reviewed annually by the department at the fall retreat during convocation.)

## Section 2 - Program Educational Objectives

Graduates of the Applied Mathematics Program will be prepared to do the following in the first few years after graduation.

1) Apply critical thinking and communication skills to solve applied problems.
2) Use knowledge and skills necessary for immediate employment or acceptance into a graduate program.
3) Maintain a core of mathematical and technical knowledge that is adaptable to changing technologies and provides a solid foundation for future learning.

## Section 3 - Program Description and History:

The Applied Mathematics Degree was approved by the Oregon University System in the spring of 2006, and the program was implemented beginning in the fall of that year. The program graduated its first student in the spring of 2008. We have had problems identifying the number our students because some of them are dual majors and are not required to declare themselves as an Applied Math major or have a math advisor until two terms before graduating. However, we currently estimate there are approximately 35-40 Applied Mathematics majors, about 20 of which are earning dual degrees.

Coursework for Applied Mathematics intends to provide a solid foundation of mathematical theory and a broad selection of applied work both in and outside mathematics and across many fields. Graduates with a B.S. in Applied Mathematics work for such organizations as pharmaceutical companies (doing statistical analysis, or modelling the behavior of developing drugs using differential equations), insurance companies (as actuaries), publishing companies (as editors of technical publications), government agencies (like the National Security Agency), and public schools and colleges.

## Program Headcounts*:

| Fall <br> 2016 | Fall <br> 2017 | Fall <br> 2018 | Fall <br> 2019 | Fall <br> 2020 |  |  |  |
| :--- | :---: | :---: | :--- | :--- | :--- | :--- | :--- |
| 32 | 28 | 35 | 31 | 36 |  |  |  |

* The headcount is often difficult to measure since many students are dual majors and sometimes not counted.

## Program Graduates:

| $2012-$ <br> 13 | $2013-$ <br> 14 | $2014-$ <br> 15 | $2015-$ <br> 16 | $2016-$ <br> 17 | $2017-$ <br> 18 | $2018-$ <br> 19 | $2019-$ <br> 20 | $2020-$ <br> 21 |
| :---: | :--- | :--- | :--- | :---: | :---: | :--- | :--- | :--- |
| 7 | 4 | 4 | 5 | 7 | 8 | 4 | 7 | 11 |

## Employment Rates and Salaries:

More information regarding the data used is available from Oregon Tech's Career Services.

| Years | Employed | Continuing <br> Education | Median Salary | Success <br> Rate |
| :---: | :---: | :---: | :---: | :---: |
| $2015 / 2016 / 2017$ | $70 \%$ | $30 \%$ | $\$ 47,000$ | $100 \%$ |
| $2016 / 2017 / 2018$ | $33 \%$ | $44 \%$ | $\$ 47,000$ | $78 \%$ |
| $2017 / 2018 / 2019$ | $57 \%$ | $19 \%$ | NA | $81 \%$ |
| $2018 / 2019 / 2020$ | $50 \%$ | $17 \%$ | NA | $72 \%$ |
|  |  |  |  |  |

## Dates for when course objectives have been last revisited:

The department has created course objectives, student learning outcomes and supporting criteria for each course that is offered thru the department. The following dates list the last time the course objectives file was reviewed/modified. The courses in red will be reviewed this year.

| Course | Date Last Updated | Months since last update |
| :---: | :---: | :---: |
| MATH 070 | 3/27/2005 | 197 |
| MATH 111 | 11/1/2009 | 142 |
| MATH 221 | 10/12/2010 | 131 |
| MATH 354 | 11/21/2011 | 117 |
| MATH 311 | 1/24/2012 | 115 |
| MATH 465 | 1/24/2012 | 115 |
| MATH 362 | 1/28/2014 | 91 |
| MATH 346 | 6/17/2014 | 87 |

## Section 4 - Program Student Learning Outcomes

Upon graduation, students will be able to

1. apply mathematical concepts and principles to perform computations
2. apply mathematics to solve problems
3. create, use and analyze graphical representations of mathematical relationships
4. communicate mathematical knowledge and understanding
5. apply technology tools to solve problems
6. perform abstract mathematical reasoning
7. learn independently

## Section 5 - Curriculum Map

## Freshman Year

## Fall

MATH 251 - Differential Calculus (4)
SPE 111 - Public Speaking (3)
WRI 121 - English Composition (3)
Social Science Elective (3)
Elective Credit Hours: (3)
Total: 16 Credit Hours
Winter
ENGR 266 - Engineering Computation (3)
MATH 252 - Integral Calculus (4)
PHY 221 - General Physics with (4)
WRI 122 - Argumentative Writing (3)
Social Science Elective (3)
Total: 17/18 Credit Hours
Spring
MATH 253N - Sequences and Series (4)
PHY 222 - General Physics with Calculus (4)
Humanities Elective (3)
Social Science Elective (3)
Total: 14 Credit Hours

## Sophomore Year

## Fall

MATH 254 N - Vector Calculus I (4)
MATH 310 - Mathematical Structures (4)
PHY 223 - General Physics with Calculus (4)
Elective (3)
Total: 15 Credit Hours

## Winter

MATH 341 - Linear Algebra I (4)
MATH 354 - Vector Calculus II (4)
Elective (4)
Humanities Elective (3)
Total: 15 Credit Hours
Spring
MATH 361 - Statistical Methods I (4)
Elective (3)
Elective (3)
Elective (3)
Humanities Elective (3)
Total: 16 Credit Hours

## Junior Year

## Fall

MATH 321 - Applied Differential Equations I (4)
SPE 321 - Small Group and Team Communication (3)
Focused Elective (3)
Elective (4) (upper division)
Total: 14 Credit Hours
Winter
MATH 311 - Introduction to Real Analysis (4)
WRI 227 - Technical Report Writing (3)
Focused Elective (3)
Elective (3) (upper division)
Elective (3)
Total: 16 Credit Hours
Spring
MATH 322 - Applied Differential Equations II
(4)

MATH 451 - Numerical Methods I (4)

## Section 7 - Assessment Activities 2020-21

Assessment of three learning outcomes was conducted during this academic year (Outcomes 3,6,7). A combined rate of proficiency and high proficiency of at least $60 \%$ is considered a minimum acceptable performance. We used three direct measures for each outcome and one indirect measure. We had planned to also include an additional indirect measure for each by using the student exit survey, however, since the response rate was only 1 student, we decided to omit this data as it was deemed statistically insignificant.

Outcome 3: Create, use and analyze graphical representations of mathematical relationships was assessed in Math 422, in the Winter of 2021. The instructor was Dr. Tiernan Fogarty. There are two performance criteria for this PSLO.
a) Create a graph using Technology.
b) Interpret Graphical Data with Respect to Error Analysis

All 12 students in Math 422 during winter 2021 were Applied Mathematics majors. The criteria were measured through technical report-projects. All students were expected to solve the problems analytically and create a code resulting in a graphical representation of the solution. For this particular problem, the students were asked solve the spherical wave equation with a given initial disturbance and graph the solution as a function of time and space. Creating the graph (multiple graphs or an animation) from the analytical solution is a very nontrivial exercise. Students were left to their own devices to create a method to demonstrate error analysis.

Table 2. Rubric for Outcome 3 Create and Use Graphs,
Create, use and analyze graphical representations of mathematical relationships.

|  | High <br> Proficiency (3 pts) | Some <br> Proficiency (2 pts) | Little or No <br> Proficiency (1 pt) |
| :--- | :--- | :--- | :--- |
|  | Graph is correct. Good <br> labeling: title, axes |  |  |
| labeled, legend |  |  |  |
| Create a Graph using | included. Good use of <br> Technology (1.000, <br> colors and symbols. <br> Appropriate <br> use/identification of <br> scale. | Graph is correct, <br> lacking some labels <br> or proper details. | Graph is not <br> correct. |

| Interpret Graphical Data With Respect to Error Analysis (1.000, 50\%) OITBMTH. 3 | Explain in words and with a graph, error analysis by comparing graphical and theoretical results. | Correct written interpretation of the graph. <br> No graph provided that further explains error analysis | Incorrect <br> explanation of graphical results. <br> Explanation does not include graphical interpretation. |
| :---: | :---: | :---: | :---: |

## Table 3. Assessment results for Outcome 3.

|  | Student Performance |  |  |
| :---: | :---: | :---: | :---: |
| Criterion | Some/no <br> proficiency | Proficient | High <br> Proficiency |
| (a) Create a Graph | $0.09 \%$ | $36 \%$ | $63.1 \%$ |
| (b) Interpret Graphical <br> Data with Respect <br> to Error Analysis | $9.9 \%$ | $27 \%$ | $63.1 \%$ |

For the first criteria, all but one of the students were successful in creating the correct graph and four of the 13 did not properly label / title the graph

For the second criteria, 7 of 13 were able to provide correct wording and a graph(s) of error analysis. Three of the students performed proper error analysis but did not graph the analysis and two of them did not perform error analysis.

Based on this assessment exercise, our students met or exceeded our stated $60 \%$ performance minimum.

Outcome 6: Perform abstract mathematical reasoning". MATH 311 was taught by Dr. Dibyajyoti Deb during Winter 2021. A total of 12 students took the course. Assessment was done by looking at

- Indirect measures - student final exam scores and student course grades.
- Direct measure - assess performance on two criteria directly from student work.

## Indirect Measure

The table below lists the final exam score (out of 100) and the course grades of the 12 student who took the course (in descending order of scores and their respective grades). Note that 2 of these students did not take the final exam.

| Final <br> Exam <br> Score | 88 | 83 | 74 | 66 | 61 | 54 | 53 | 52 | 50 | 16 | 0 | 0 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Course <br> Grade | B | A | B | C | C | C | B | C | C | F | F | F |

Table 1: Final Exam Scores and Course Grades

## Direct Measure

For direct measure, two performance criteria for this PSLO were assessed directly from student work. These were:

1. Present a formal proof of the limit of a function at a point.
2. Present a formal proof that a sequence is a Cauchy sequence.

The above criteria were measured by problems given in the final exam. Since two students did not take the final exam, hence, they were not included in the results of these measures. The results are shown in Table 2.

- Present a formal proof of the limit of a function at a point

This criterion was tested by presenting the students with a rational function and its limit at a point. The students were then asked to present a formal delta-epsilon proof. A response showed high proficiency if the student chose an appropriate delta and showed algebraically that this bounded the function to within epsilon of its limit. A response showed proficiency if the student bounded the difference between the function and its limit, but did not clearly tie together epsilon and delta.

- Present a formal proof that a sequence is a Cauchy sequence

This second criterion was tested by presenting the students with a sequence and asking them to use the definition of Cauchy sequence to prove that the sequence is Cauchy. The definition of a Cauchy sequence was asked as separate part of the same question. The proof requires constructing a choice of integer N and to follow thru by showing that the difference of any two terms "after N " is bounded by epsilon. A response showed high proficiency if the student constructed an appropriate choice of N and followed thru with appropriate proof that any two terms differ by at most epsilon. A response showed proficiency if one of these steps was either poorly done or omitted entirely.

| Criterion | Some/No Proficiency | Proficient | High Proficiency |
| :---: | :---: | :---: | :---: |
| Proof of Limit | 7 | 2 | 1 |

| Proof of Cauchy <br> Sequence | 0 | 3 | 7 |
| :---: | :---: | :---: | :---: |

Table 2: Assessment results of direct measures of Outcome 6

## Conclusion

MATH 311 is traditionally a challenging course for the majority of math majors. While the question that involved presenting a formal proof of the limit of a function did not have the best outcomes, the overall student performance in the course was quite good. 9 out of the 10 students who completed the course (i.e. took the final exam) earned a C or better. In addition, the question testing the proof of a Cauchy sequence had very good outcomes where all the 10 students were proficient or above, including 7 students who were highly proficient.

Outcome 7: Independent learning was assessed in Math 354 Vector Calculus II, during Winter term 2021. The instructor was Dr. David Hammond. There are three performance criteria for this PSLO.
a) Determine or recognize an application of vector calculus.
b) Read and analyze an application not studied in the class.
c) Give a presentation that relates the application to the material studied in class.

The Independent learning assessment was done in Math 354 winter term, 2021. These three criteria were measured on the basis of the students' final presentations, as well as on a written abstract for the presentation. The written abstract was collected in week 7 of the term, and students gave their final presentations during week 10 of the term. These presentations were each 10-15 minutes long, and students were allowed to work in groups of up to 2 students. There were 10 students in the class, 9 of whom were math majors (several as a dual major). Only the math majors are included in the data presented here.

These three criteria were evaluated based on the rubric below:

| a) determine or recognize an application of vector calculus |
| ---: |
| Student independently chooses relevant topic |
| Use of green's/stokes' and or divergence theorem is clearly described |
| b) read and analyze an application not studied in the class |
| The presented mathematics is correct |
| Correct mathematical notation is used |
| c) give a presentation that relates the application to the material studied in class |
| Presentation begins with clear statement of problem or topic |
| Slides laid out clearly, with clear figures if appropriate |
| Spoken presentation is clear and easy to follow |
| Presentation ends with a conclusion |

Table 3 demonstrates the students' performance. The group performance is recorded as a percent indicating low proficiency, proficient, or highly proficient on each of the three assessment questions

|  | Student Performance |  |  |
| :--- | :---: | :---: | :---: |
| Criterion | $\%$-Some/no <br> proficiency | $\%$-Proficient | $\%$-High <br> Proficiency |
| Recognize an application | 11 | 11 | 78 |
| Analyze an application | 11 | 11 | 78 |
| Oral presentation | 22 | 11 | 67 |

Table 4. Assessment results for Outcome 7.
For the first of the criteria, to recognize an application of one of the integral theorems, $78 \%$ of the class demonstrated high proficiency, by clearly identifying a relevant application of either green's theorem, stokes' theorem or the divergence theorem in their abstract and/or final presentation. One student did not mention these theorems at all in their presentation, and did not show any proficiency in this objective, whereas 1 other student showed some proficiency but not high proficiency.

Very similar results were observed for the second criteria, as assessed by the correctness of the mathematical content presented, the mathematical notation used, and the relevance of the mathematical results presented to the chosen application.

For the third criteria, $67 \%$ of the students demonstrated high proficiency through the quality of their spoken presentations, the design and layout of their slides, and through the organization of their presentation. 2 students showed little or no proficiency for the third criteria, and one showed some proficiency but not high proficiency.

Based on this assessment exercise, our students met or exceeded our stated $60 \%$ performance minimum for Outcome 7.

## 8. Evidence of Improvement - Closing the Loop

We continue to feel strongly that the decision was correct to create a course Math 310 Mathematical Structures and require this course as a prerequisite to Math 311 Introduction to Real Analysis. Considering the PLSO \#7 Independent learning, we continue to require students to submit their abstracts earlier in the term to allow time to get feedback before their presentations.

## 9. Data-driven Action Plans: Changes Resulting from Assessment

The faculty assessed three program student learning outcomes $(3,6,7)$ during the 2020-21 academic year. The faculty reviewed the results during the fall term 2020 during a faculty meeting and had the following conclusions.

Outcome 3 (graphing): Students met all performance criteria and no further action is required at this time. The student performance was quite good except for one specific question. As noted above, the instructor felt that the student performance was over-all excellent. Students met all performance criteria and no further action is required at this time.

Outcome 6 (abstract reasoning): Overall, the assessments results for abstract reasoning were good. There was some concern about the low scores related to the proof related to the limit of a function at a point. We will see where else in the curriculum the formal definition of the limit is or can be introduced. We will make a note to revisit and assess formal limit proofs again in Math 311. Students met all performance criteria and no further action is required at this time.

Outcome 7 (independent learning): Overall, the assessment results were good. Students met all performance criteria and no further action is required at this time.

## Changes Resulting From Assessment

Based on our assessment results for the learning outcomes PSLO 3, 6 and 7 no formal changes were deemed necessary.
