Dear Hiring Manager,

I am writing to express my enthusiasm for the Software Engineer I position at Micro Systems Engineering, Inc. in Lake Oswego, OR. As a recent graduate from Oregon Institute of Technology with a **Bachelor of Science in Software Engineering Technology**, I am eager to contribute to Micro Systems' mission of developing life-saving medical device technologies. The opportunity to work on innovative applications that improve patient outcomes aligns perfectly with both my technical skills and personal values.

During my academic career, I gained hands-on experience in **C#, object-oriented programming, and software development lifecycles** through coursework and team projects. For example, in my senior capstone project, I collaborated with a team to design and implement a secure, database-driven application, where I focused on building efficient backend systems and ensuring code quality through rigorous testing. These experiences taught me not only how to write clean, maintainable code but also how to work within structured development processes; skills I am excited to apply within a regulated industry like medical technology.

Beyond technical expertise, I bring strong **communication and problem-solving skills**, developed through group projects and industry internships where I worked closely with peers and faculty to deliver solutions under tight deadlines. I thrive in collaborative environments and am committed to learning from experienced engineers while contributing to the success of the team. Additionally, my interest in **cybersecurity** and commitment to **quality and reliability** align with Micro Systems' values and the critical nature of medical software systems.

I would be honored to bring my dedication, technical foundation, and eagerness to grow to Micro Systems' Software within the External Medical Device team. Thank you for considering my application. I look forward to discussing how my background and enthusiasm can contribute to your mission of improving lives through cutting-edge technology.

Sincerely,

Kylie Anderson

WHY THIS WORKS
• The heading matches the applicant's resume for consistency. • They started the letter using 'Dear Hiring Manager' instead of something more general like 'Sir or Madam'. If you can address it to the hiring manager by name, it is even better. • Highlighted their knowledge of the company and its mission.
